Dimensions:

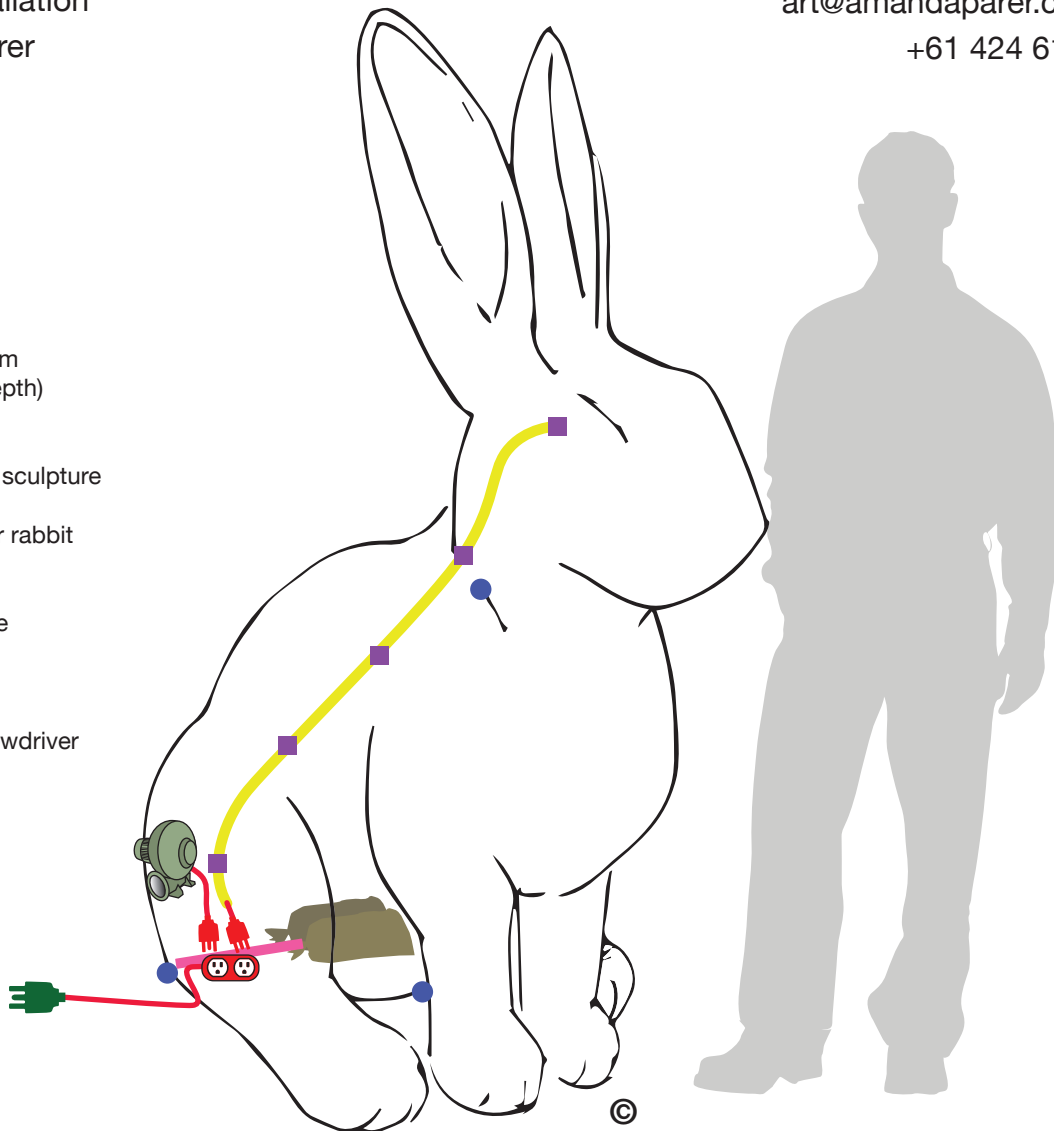

7'3" x 4'5" x 5'7"
2.2m x 1.35m x 1.7m
(height x width x depth)

Included:

- Intrude sm rabbit sculpture
- Air blower
- LED strip light per rabbit
- Sand bag bags
- Tent pegs
- Starter tether rope
- Carry bag

You will need:

- Phillips head screwdriver
- 20kg of sand

Instructions for installing your Intrude sm

1. Take out your rabbit inflatable from the bag and lay out on the floor/ ground.
2. Unscrew the outer clip of the air blower with a Phillips head screwdriver and then place the main body of the air blower inside the rabbit at the tail.
3. Locate the circular hole in the fabric and then match the air inflow vent into the hole facing out. Screw the outer clip back onto the main body of the air blower from the outside of the inflatable. (This will hold the air blower in place.)
4. Locate the top end of the LED strip (not the plug end) and secure this to the further most Velcro strap located inside the rabbit's head. Work your way down the full length of the LED strip securing it to the Velcro straps down the length of the rabbits lower back. (LED lights facing inwards.)
5. Plug the air blower and LED strip light plugs into the double adaptor provided.
IMPORTANT NOTE: For outdoor use, cover the adaptor with the red weatherproof power cord cover provided.
6. Place 2 x double bagged sand bags (10kg each in weight) inside the inflatable and close the inflatable opening. Double bagging helps prevent the sand leaking into the inside of the inflatable.
7. Plug the double adaptor power cord into an external power source and turn on.
An extension cord may be required. If installing outdoors all power joins must be covered with a weatherproof power cord cover.
8. Anchor using tent pegs and/ or tether rope attached through the D-ring tether points as required.
9. LED strip light can be turned inwards from outside the rabbit once inflated.
10. Enjoy!!

The inflatable is made from Nylon 210D and is water resistant and fire resistant
1 year limited warranty on electrics
